This compiled data from the UK clearly indicates the vaccine rollout should have been stalled for further investigation by early February 2021 based on the findings of increased mortality risks in January 2021. Alternatively, or in addition, the sudden increase in mortality risk by the end of May 2021 (related to the emergence of the delta variant in the UK and given the fact that the vaccines caused the emergence of the delta variant globally, Laderoute MP submitted), the EUAs for the COVID-19 vaccines should have been rescinded worldwide by early June 2021.

In the UK, the rescinding of the EUAs by the end of May 2021, would have prevented 20,645 COVID-19 deaths and 368,347 non-COVID-19 deaths for a total of 388,992 deaths from all causes from June 1, 2021 to May 31, 2022. From June 1, 2021 to September 12, 2022, 44,394 COVID-19 deaths could have been averted by stopping the vaccines at the end of May 2021 (given 48.6 % of the C19 raw deaths were associated with the vaccine).

See hervk102.substack.com for the definitive data proving the COVID-19 vaccines are neither safe nor effective (as expected by world experts) and that the vaccine program should have been halted by the end of January 2021 worldwide. Censoring of this critical data globally by public health 'authorities', Big Media Tech and medical journals, would be considered crimes against humanity. All must be held accountable, particularly those who mandated, procured, distributed, manufactured, administered, authorized (EUA) or recommended these deadly vaccines including those who spread the false notion that these COVID-19 vaccines were safe and effective.

## Translate post

This data is the final version of the data compiled from the UK ONS data released on July 6, 2022. There were some inconsistencies in the all-cause mortality rates for February 2022 and April 2022 (which were too high for the ever vaxed rates) and were corrected by adding up the NON-C19 and C19 ever vaxed totals.
